Opportunity of a different dimension

Tees Valley Regeneration is in business to create irresistible development and investment opportunities and to deliver sustainable and meaningful economic activity for the long-term development of the Tees Valley region.

We came into being in 2002 as one of the first wave of urban regeneration companies established by the Government across England.

Our shareholders are the five councils that comprise the Tees Valley; Darlington, Hartlepool, Middlesbrough, Redcar and Cleveland and Stockton on Tees; the Regional Development Agency, One NorthEast; and English Partnerships, the national regeneration agency.

In 2003, we merged with the area's inward investment arm - the Tees Valley Development Company (TVDC) - itself a creation of the five Tees Valley councils. The team has had a highly successful track record and has spearheaded the creation of over 10,000 jobs and attracted over £270 million of inward investment. Now Tees Valley Regeneration combines the expertise of both companies and creates a single driver and catalyst for the whole Tees Valley.

Climate changes means that water is likely to become an increasingly critical resource.

Through Northumbrian Water, water-dependent manufacturers in the Tees Valley have access to the UK's premier water supply, supported by the huge Kielder Water Reservoir. Northumbrian Water has never imposed water restrictions in the Tees Valley and does not expect to have to.

Surface water like Kielder's is naturally soft, unlike the underground aquifer supply in many areas.

Northumbrian Water supplies in two grades (partially treated and potable) and is eager to offer quality tailored to individual customer requirements in a consultancy-based industrial partnering agreement.

effluent and waste treatment

The Tees Valley's effluent and waste treatment resources are amongst the most advanced in the UK. Investment in the infrastructure is continuous - in 1995 work began on a new, centralised effluent and sludge treatment centre to service the needs of industry and the population of Tees Valley. The plant at Bran Sands - winner of four environmental awards - provides effluent treatment for major multi-national companies in the vicinity.

Northumbrian Water can advise Tees Valley companies on all aspects of water and waste treatment, solid and liquid disposal, recycling and special waste management.

No area in the UK is better equipped to handle the treatment of waste and effluent of all kinds.

Water critical businesses

If the steady, secure, cheap and abundant supply of water is mission-critical to your business look no further than Tees Valley.

World class infrastructure

Due to the industrial history of Tees Valley, there is already in place a world class water and waste infrastructure - easy to connect to and secure of supply.

Tees Valley water supply

Five reservoirs located in the Teesdale area feed Tees Valley

Back up from the UK's largest man made lake, Kielder Water,

The UK's highest potable water compliance level

One of the cheapest potable water tariffs available in the UK

High quality raw water supplied naturally

The cheapest raw water in the UK
